

CopyTrans Photo – Crash course tutorial

Transfer photos from PC to iPod or iPhone & vice-versa

This crash tutorial will allow you to take control of your iPod & PC photos in a matter of seconds. Easily browse, select & copy your photos back & forth your iPod (including iPhone & iPod Touch). Share your best souvenirs in slideshows & have fun!

CopyTrans Photo overview

Once you open CopyTrans Photo and connect your iPod, iPhone or iTouch, your iPod pictures are listed on the left-hand side of the program. On the right-hand side, you will find your computer images. Use the explorer to navigate through computer folders.

Create albums on your iPod or iPhone

Before copying photos on & off your iPod, you need to learn how to create new albums on your Apple player: Click on the "New Album" button (here, circled in blue), name the iPod album and click "OK".

iPhone users, your albums will be created in the iPhone's Photo Library, not in the Camera Roll. Remember that the Camera Roll only stores the pictures you have taken with the iPhone.

Create folder shortcuts in CopyTrans Photo

As shown on the following image, you can create folder shortcuts in Copytrans Photo to rapidly access your computer folders. The shortcut will be created based on the last open tab. Use the

Explorer to open a new folder and double click on it. The pictures will be displayed and the shortcut will now be named according to the new folder.

To close the shortcut you have just created, right-click on it and select the "close" option on the popup menu.

Transfer PC Photos to iPod & iPhone

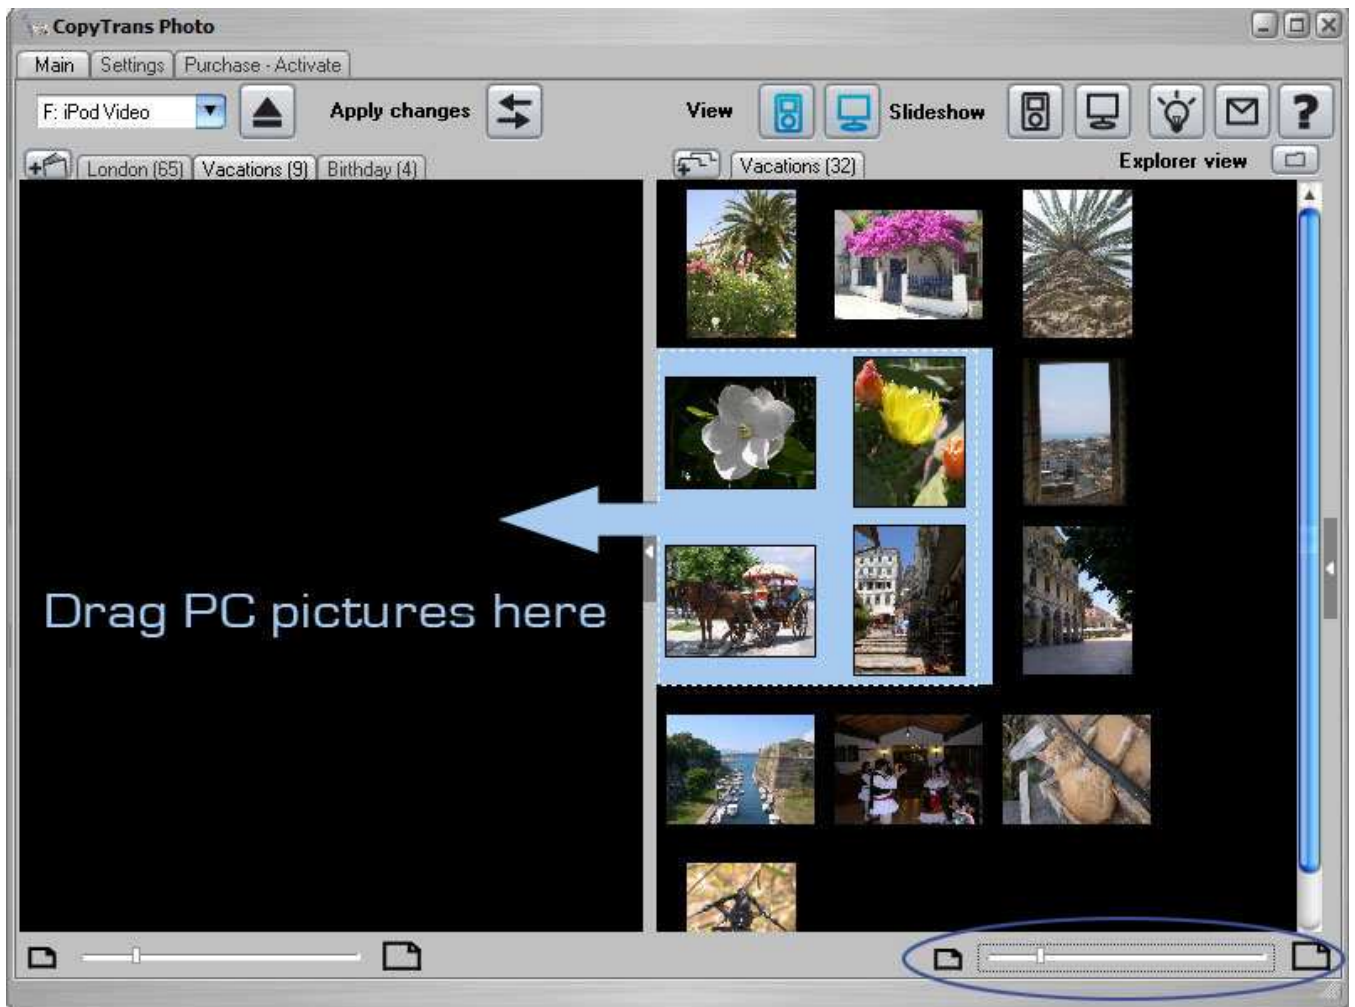

Open any computer folder & select the pictures you want to add to your iPod. The selected photos will be highlighted in blue. Then, simply drag & drop the photos to the left-hand side window (see image below).

Note: the photos will only be copied once you click the "Apply changes" button. More info: <http://www.copytrans.net/gettingstartedphoto3.php>

iPhone users, please note that you can transfer computer photos either to the iPhone's Photo Library or to an album, but not to the Camera Roll as it only contains the photos taken with the iPhone camera.

Hints:

- Click on a photo to select it
- To select all your iPod photos, press Ctrl+A or click with the right button of your mouse on any photo and choose "Select all".
- To quickly select several pictures but not all, keep the Shift key down while you click on photos to select several of them in a row or Ctrl to select several separated ones.

Transfer iPod & iPhone Photos to PC

To transfer iPod photos back to your computer, repeat the steps mentioned above, but this time in the other direction (left to right).

Note: Remember that the photos will only be added to the computer once you click the "Apply changes" button.

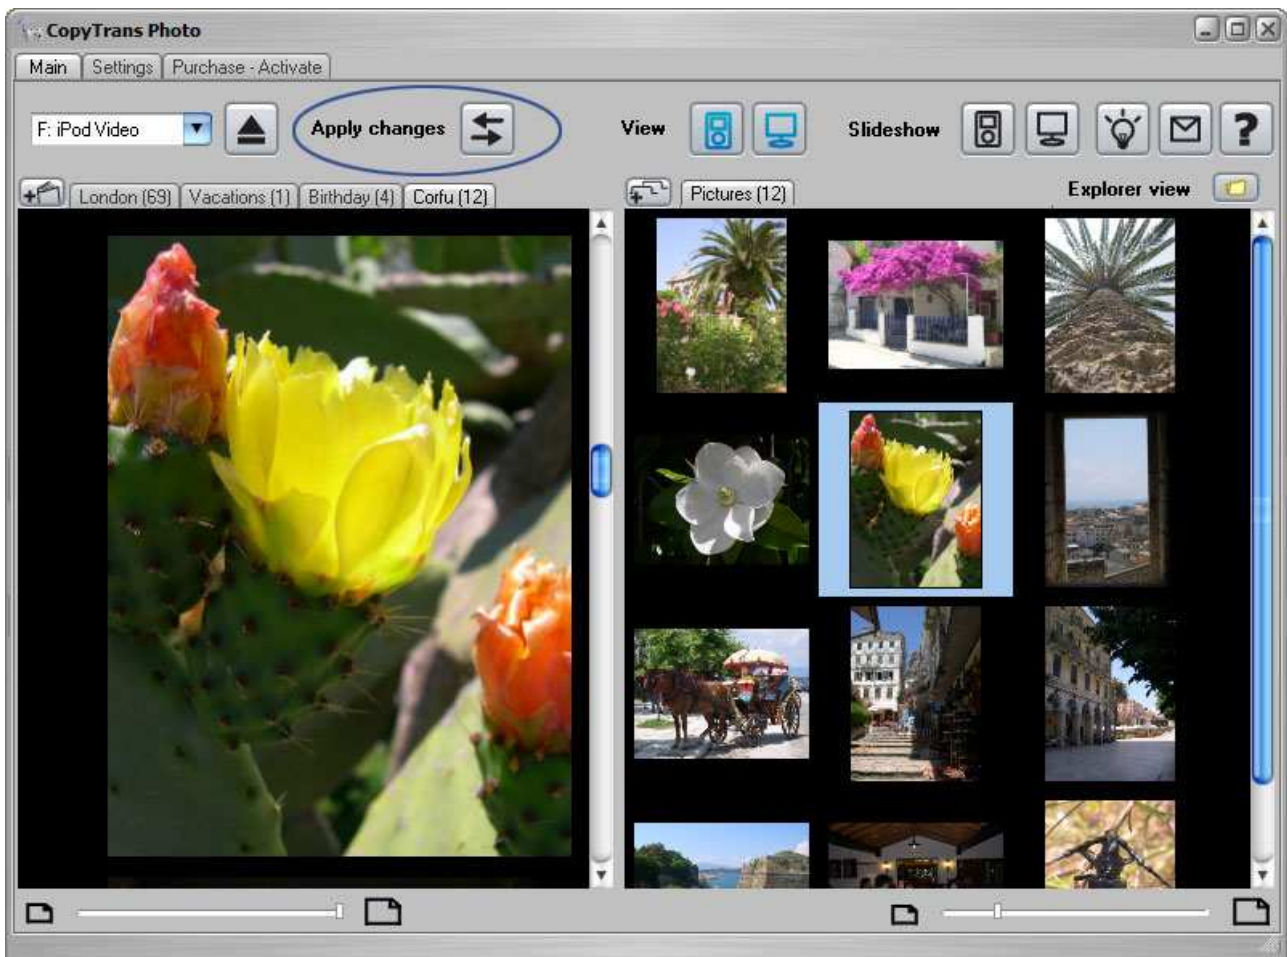

Apply changes

Finally, apply the changes you have made both to your computer & iPod pictures by clicking on the "Apply changes" button. In case you don't want the changes to take effect, just walk out of the application by closing it down.

To see the results on your iPhone or iPod Touch, please go back to the main menu and click on the Photos icon to refresh. You will see all your recently added photos appear on the screen.

Note: A slight watermark logo will be added to your photos when using the trial version of CopyTrans Photo. Please note that you can avoid this and many more limitations by purchasing the full version: <http://www.copytrans.net/purchase.php>

Now, you can:

- View your new photo collection:
